

VERIFIEDNEPAL

Running Your Organization

A guide for NGOs, community groups and other organizations — registering, opening drop centers where people can drop off help, and keeping a transparent goods ledger.

Register your organization

Any group helping on the ground can register — NGOs, community groups, companies, religious organizations or government teams. Anyone signed in with Google can register; moderators verify afterwards.

- 1 Sign in with Google.** The account you use becomes the organization's owner account.
- 2 Fill in the registration form.** Your organization's name and type, a contact person and phone, the districts you work in (up to 10), and a short description of what you do. Registration number and website are optional.
- 3 Start working immediately.** Your organization begins as **provisional** — you can create drop centers and log goods right away. They appear publicly, badged "Unverified", until a moderator verifies you.
- 4 Find it again anytime.** Your organization lives at verifiednepal.com/org — "My organization", also linked in the site footer.

How verification works

A moderator reviews every registration, usually with a phone call to your contact person. Verified organizations lose the "Unverified" badge and are shown under one of three tiers:

Known	On a seed list or an established, publicly known organization.
Vouched	An already-verified organization vouched for you. Your dashboard shows your organization ID — share it with a verified organization and ask them to vouch.
Self-declared	Moderators checked what they could; the organization's details are self-declared.

Open drop centers

A drop center is a physical place where **anyone can drop off help** — food, water, shelter goods and other supplies. Each center you create is listed publicly on the site's drop-center map and pages, so people nearby know where to bring things.

- ✓ **Set it up clearly.** Name, district, municipality or rural municipality (palika), address, opening hours, a contact phone, and which categories of goods you accept. The ward you choose must belong to the palika you picked.
- ✓ **Keep the status honest.** Mark a center Open, Paused or Closed as things change.
- ✓ **Print the donor QR poster.** Donors scan it at your center — "I dropped something here" — declare what they left, and get a reference code.
- ✓ **Confirm donor drops.** Declared drops wait in your dashboard; confirming one logs it as an intake, and donors can follow their goods with their code.

Keep the goods ledger

Every center has a running ledger of goods in and out. It takes seconds per entry, and it is what makes your work credible to donors and moderators.

- 1 **Intake** — goods arriving at the center, whether from a confirmed donor drop or logged directly.
- 2 **Distribution** — goods handed out to people who need them.
- 3 **Transfers** — send stock to another drop center on VerifiedNepal, or record that it went somewhere else. The receiving center confirms the quantity that actually arrived; any difference is recorded as a discrepancy.
- 4 **Corrections** — mistakes aren't edited away. A correction reverses the wrong entry with a reason, then you log the right one. The trail stays visible.

Everything is public. Stock on hand and recent activity are visible to everyone, marked as logged by your organization and not independently verified. An honest, current ledger is your reputation.

Bring in your team

- ✓ **Invite staff by email.** From your dashboard, invite colleagues by their Google email — they join automatically the first time they sign in.
- ✓ **Staff can run centers.** Staff log intakes, distributions and transfers; only the owner can edit the organization's details.
- ✓ **Vouch for others.** Once you're verified, you can vouch for a pending organization you know and trust — once per organization.

Take on a published need directly

Once verified, your organization has a second way to help beyond the drop-center ledger: taking on a request straight from the Give-help board, instead of waiting for a moderator to match it.

- 1 Claim a need.** Any staff member can claim a published request from the dashboard — it's reserved to your organization once claimed.
- 2 See the beneficiary's details.** Contact information becomes visible in your dashboard so you can arrange the handover directly.
- 3 Mark it delivered, or hand it back.** You have 6 days from taking a need to deliver it or hand it back; after 6 days it returns to the open list automatically. Delivering writes the same public ledger entry as a claim-code handover, and from your dashboard you can attach an optional delivery receipt — a photo, the number of households served, and your location. The photo and location stay private to moderators and the family; only the household count is public.

One request, one outcome. Whether it's fulfilled by your organization or through a moderator's claim code, a need can only ever be marked fulfilled once.

See where help is still needed: /coverage

The public **/coverage** page breaks every active disaster down ward by ward — how many requests are open, in progress and delivered there, and how many days since the last delivery. Wards that haven't been reached yet are listed first, so it's easy to see where to focus next.

- ✓ **Download it as "3W" data.** A "who does what where" file, as an HXL-tagged CSV or GeoJSON, keyed to province, district, municipality (BIPAD id) and ward.
- ✓ **No personal data.** The export never includes beneficiary names or contact details, only counts by area.
- ✓ **Share it with your information officer.** It's built for coordination meetings and situation reports, not just browsing.
